

European Mortality Bulletin, week 30 2018:

Overall, the pooled estimates of all-cause mortality show normal expected mortality levels for the participating countries. However, there are signs of excess mortality in a number of countries in the north of Europe, especially among the elderly, which could be related to the current heat wave affecting many European countries.

Data from 23 countries or regions were included in this week's pooled analysis of all-cause mortality.

Number of deaths in the past weeks should be interpreted with caution because adjustments for delayed registrations may be imprecise. Furthermore, results of pooled analyses may vary depending on countries included in the weekly analyses. Pooled analyses are adjusted for variation between the included countries and for differences in the local delay in reporting. Further details are available on <http://www.euromomo.eu>.

Pooled number of deaths

EuroMOMO: week 30, 2018

— Stratified baseline — Delay-adjusted number of deaths
 - - - Normal range (+- 2 z-scores) — Substantial increase (4 z-scores)

Participating countries:

Austria, Belgium, Denmark, Estonia, Finland, France, Germany (Berlin), Germany (Hesse), Greece, Hungary, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Sweden, Switzerland, UK (England), UK (Northern Ireland), UK (Scotland), UK (Wales)
